

PROJECT SCOPE STATEMENT	
Project Name	Rate My Music
Project Deliverables	Detailed Description
View personal ratings	Users can rate a song through the website and can view their ratings. Users can view all their ratings, including the ones they did in the past. By having access to past ratings, a user can come back to the rating after a while and see how their opinion on the song has changed.
View personal track	Users can keep track of songs they love, as it is very hard to remember the name of the song we loved after a couple of years of not listening to it. A user can remember these songs by placing them in folders of their choice, so it is easier for them to refer back to in a few years or simply by rating them and having the song's rating in their list. By keeping a track of these songs, it will be easier for a user to find songs they forgot the names of.
View sorted Music	Users will be able to sort the music based on genres, artist and can also make their own playlist or folder to store the music they love. By allowing users to sort their music, it will be easier for them to find the song they are looking for much faster. They can sort their music by anything they would like, for example: by genres, mood, artists, year released, year added or anything else.
Project Exclusions	
This website will not allow users to see personal ratings of their friends, as the website will show overall ratings.	
Out Of Scope: There will be no reminder if an artist adds a new song.	
Users may not leave a written review on the song since that may be too difficult to code within the set time frame.	
User will not receive recommend songs on their homepage since it is beyond the current scope and likely will not fit in our project time frame.
